

Make the idea visible.

A rough explanation. A clear story. One next action.

What you get

One installable AI skill, starter prompts and a guide to turn training and how-to material into memorable comic scenes.

A skill is a saved set of instructions for your agent. It is not a new app or image model. Your agent needs an image tool to render the pictures.

GET THE PACK + WORKING EXAMPLE

comic-explainer-by-mk.netlify.app

Your first comic.

Start with one useful idea, not a polished script.

1 Install the complete folder

Download and extract the ZIP. Copy comic-explainer, including its references, licence and notice, into your agent's skills directory. In Codex the default is ~/.codex/skills. Preserve any existing version before updating. Start a new session.

2 Tell it who, why and what next

Name your audience, their problem, the one idea to remember, the action afterwards and your delivery time.

3 Copy this prompt

```
Use $comic-explainer.  
My audience is [who].  
They struggle with [specific problem].  
Remember this: [one sentence].  
Afterwards they should [one action].  
I have [10 / 15 / 20] minutes.  
  
Turn my explanation into six or nine comic scenes.  
Label everything in English. Generate each picture  
separately. Add short headlines and talking points.  
Keep long explanations in notes.  
Finish with one action they can practise today.  
  
Here is my explanation: [paste it here]
```

No image tool? Ask for the storyboard and prompts. Use only material you are allowed to share.

Make it stick.

Use the pictures as memory anchors, then practise the action.

Choose the right finish

PLAN FIRST: Ask for storyboard and prompts only.

MAKE THE PICTURES: Ask for individual scenes, then inspect labels, counts and the physical action.

PRESENT IT: Ask for a website with arrow keys, expandable detail, presenter notes and a clean recording view. Explicitly name the host and request publication.

Give feedback that fixes one thing

“The character should open the gate.” “There are fifteen tally marks; make twenty.” “Move the paragraph into a pop-out.”

See it working

presence-four-ways-sales.netlify.app/#1

Nine scenes. Arrow keys to move. N for notes. F for recording view. The depth and campaign figures are illustrative examples, not market rules.

Two names to remember

Comment EXPLAINER gets the pack. Comic Explainer is the skill name. \$comic-explainer is the agent command.

Credit + permission

Ian (@ianneo_ai) created the original illustration skill and Xiaohei visual language. Mark adapted it for training and how-to comics. MIT allows use, changes and commercial sharing when the copyright and permission notices remain. MIT means Massachusetts Institute of Technology.
